DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 33,34,42,43 are rejected under 35 U.S.C. 102(e) as being anticipated by Rheault et al.

Rheault et al. discloses the claimed invention, including a steering sensor 310, and electronic control system 300, a watercraft speed sensor 320 and a throttle position sensor 330.

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 35,36,38 and 44-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rheault et al. in view of Mukumoto.

Rheault et al. fails to disclose the storing of throttle position data within the ECM, however such is considered to have been notoriously old and well known in the art as evidenced by Mukumoto.

It would have been obvious to one of ordinary skill in the art at the time of the invention to provide stored values of various operating conditions within the ECM of Rheault et al. as is known in the art, and as taught by Mukumoto.

Such a combination would have been desirable at the time the invention was made so as to provide for efficient operation absent feedback.

5. Claim 37 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rheault et al. in view of Bernier et al.

Rheault et al. fails to disclose a timer.

Bernier et al. teaches same.

It would have been obvious to one of ordinary skill in the art at the time of the invention to provide a timer to Rheault et al. as taught by Bernier et al.

Such a combination would have been desirable at the time the invention was made so as to provide maintenance of control for a period of time after throttle is cut.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ed Swinehart whose telephone number is 703-308-2566. The examiner can normally be reached on Monday through Thursday 6:30 am to 2:00 pm..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Samuel Morano can be reached on 703-308-0230. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
